DTM PACKAGING DIVERTER For BOTTOM CODING And DEPUCKING

Counter rotating belts and positive guides ensure that all containers follow a path over the conveyor edge, controlled at all times. Adjustments for different sizes of containers take only minutes, without the need for change parts. Simply attaching the Diverter to your existing conveyor enables bottom access to containers for base coding, printing, labeling, etc .

The standard unit handles most container shapes. Variable speed drive and controls ensure that the unit matches existing conveyor line speeds. Manufactured in stainless steel with safety guards.
