

DTM Packaging Custom Automation - Fabrication and Assembly

Our Custom Automation Division has the resources to do all necessary mechanical and electrical fabrication in our 25,000 square foot facility

We make our machine frames from either cut and welded square steel tubing or extruded aluminum.

All moving parts are guarded for operator's safety. Guards are either direct enclosures or overall enclosures generally using clear polycarbonate panels. All access doors are interlocked to the machine operation.

The overall result is a good looking, rugged, easy and safe to run custom machine designed and built to give long trouble free performance.

All equipment is tested and run to the customer's satisfaction before shipping.
