REMANUFACTURED EQUIPMENT

DTM
Packaging & Custom Automation
Machinery & Engineering Services

THE REBUILDING PROCESS

- A thorough review of application requirements and specification is done to define project.
- A qualified technician is assigned to insure proper inspection and testing is completed.
- Equipment is disassembled and cleaned.
- An inspection of all wear parts is made to determine which parts are to be replaced.
- Components are cleaned and if necessary, stripped through the use of sand or glass beading.
- Lube system is fully removed and updated to today's standard.
- Guards and proximity switch interlocks added to doors for safety.
- Equipment is re-painted or re-coated to customer specification.
- The equipment is reassembled and each sub-assembly is inspected and tested.
- Equipment is dry-cycled and checked for smooth operation.
- The operation of each safety device is confirmed.
- The functionality and operation of all miscellaneous devices, including container handling parts, are verified.
- Customers are invited to inspect the machinery running prior to shipment
- Technicians are available to install the equipment and train your operators.
